Kind of Teamviewer
"Help it does not work..."

Remote support on other platforms

- Teamviewer, copilot for remote control

- Build in support with Windows after the problem wizards can not help...

- Netop for OS/2 can no longer be purchased... Copycat and other software insecure

Support the community way...

- Forums are great, some postings start with "it does not work". Sometimes long threads

- Well what does not work ? Logs, info ?!

- Setup VNC server with port forward ?
- Not every user has the knowledge to it!
- VNC is pretty insecure for us.

Solution

- Free package using SSH with a reverse tunnel.

- VNC running over the SSH tunnel.

- No port forwards to be setup by the user.

- A single package that of about 1 MB.

- Can be used on the ArcaOS USB stick! (Has NIC support and DHCP build in!).

Who can use it...

- The server side and client can be downloaded free of charge and the community can use it.

- I will provide support to login into users there desktop.

- No file transfer or chat yet.
